

Sirris – Junior Engineer Intelligent Systems/Computer Vision (Liège)

Looking for an Engineer Intelligent Systems/Computer Vision

Would you like to be part of a unique team of experts whose mission is to make the Belgian technology industry fully familiar with how to add intelligence to products and machines? Would you like to help build ambitious front-end proof of concepts in the field of technology and innovation? Are you eager to learn and enjoy working with experts from different technology domains on multidisciplinary projects? Apply now to join our mechatronics team! Read more about our **smart product innovations** here.

As an **Engineer Intelligent Systems / Engineer Computer Vision**, you will bring innovation to companies through advice and projects:

- You will contribute to R&D projects, from problem definition to full implementation.
- You will help companies with their innovation projects in the fields of computer vision, embedded systems, and control of mechatronic systems.
- You will follow the latest technological developments in the research and business world in the above-mentioned fields.
- You will advise companies on their innovations and look for modern and effective solutions, also assessing their economic feasibility.
- With your curious mindset, you will dive into coding and know when to use AI to support you.

Who are you?

Would you like to be part of a unique team of experts whose mission is to make the Belgian technology industry fully familiar with how to add intelligence to products and machines? Would you like to help build ambitious front-end proof of concepts in the field of technology and innovation? Are you eager to learn and enjoy interacting with experts from different fields of technology by working on multidisciplinary projects? Then apply now to join our mechatronics team.

- You have a Master's (or PhD) degree in Engineering in a relevant discipline (e.g., Electronics, Mechatronics, Computer Science).
- Experience is not required, but certainly more than welcome
- You are eager to be continuously challenged by new technologies
- You enjoy sharing knowledge with the industry through workshops, seminars, master classes, and social media
- Analytical thinking is your stronghold

What do we offer?

- At Sirris, innovation and collaboration are key. You will work in an environment where technological progress and sustainability go hand in hand. Together we make companies ready for the future.
- An exciting and unique position within a dynamic and innovative team.

- The opportunity to work with leading companies and technology experts who are at the heart of the industrial fabric in Belgium.
- A stimulating environment where you can further develop your expertise.
- Flexible working hours
- A competitive salary package with fringe benefits.
